Education

BITS Pilani, Hyderabad Campus — Hyderabad, India
MSc. (Hons) Biological Science & B.E. (Hons) Mechanical Engineering — *Expected May 2027*

Experience

Data Analytics Intern — May 2024 – Jul 2024
Octalsoft

- Developed Python analytics workflows with Pandas and NumPy to process customer and clinical-trial datasets, improving visibility into trial completion, account balances, remaining balances, and operational KPIs.
- Built customer-level reporting pipelines using data cleaning, validation, and exploratory analysis methods to support account health monitoring and recurring business metric review.
- Generated structured analytical outputs from operational datasets to identify completion-status patterns, balance irregularities, and KPI trends for clinical-trial management workflows.
- Contributed Oracle APEX front-end modules for Clinical Trial Management System workflows, translating operational requirements into usable data-entry and reporting interfaces.

Projects

AI Resume ATS Analyzer | *Python, Sentence Transformers, NLP, Llama, Embeddings, Cosine Similarity* Jan 2026 – Mar 2026

- Built an AI-powered Applicant Tracking System using modular document ingestion, PDF parsing, resume extraction, embedding generation, retrieval, scoring, and recommendation workflows.
- Implemented Sentence Transformers with all-MiniLM-L6-v2 embeddings and cosine similarity to solve semantic resume–job matching beyond keyword overlap.
- Integrated LLM-based information extraction, named entity recognition, fuzzy matching, and structured parsing to convert unstructured resumes into comparable candidate profiles.
- Designed ATS scoring and recommendation logic using semantic search signals to surface skill gaps, improve resume relevance, and generate targeted optimization suggestions.

Smartwatch Price Prediction System | *Python, Scikit-Learn, XGBoost, Random Forest, GridSearchCV* Oct 2025 – Dec 2025

- Developed an end-to-end supervised ML pipeline for smartwatch price prediction using feature engineering, preprocessing, model training, benchmarking, and evaluation.
- Applied missing-value imputation, IQR-based outlier removal, one-hot encoding, and Min-Max scaling to reduce data noise and prepare robust numerical features.
- Benchmarked Decision Tree, Random Forest, and XGBoost regressors to compare predictive performance and select stronger models for price-estimation tasks.
- Optimized model parameters with GridSearchCV and K-Fold Cross Validation, evaluating generalization using R^2 metrics.

Customer Segmentation using K-Means Clustering | *Python, Pandas, Scikit-Learn, K-Means* Aug 2025 – Sep 2025

- Built an unsupervised customer segmentation framework using K-Means Clustering to group customers into interpretable behavioral segments.
- Applied EDA, WCSS computation, Elbow Method analysis, and K-Means++ initialization to select cluster structure and improve centroid initialization.
- Generated customer personas and business recommendations from cluster patterns to support targeted marketing, prioritization, and customer analytics decisions.

Technical Skills

Languages: Python, SQL, Typescript, Java
Libraries: NumPy, Pandas, Scikit-Learn, Matplotlib
Machine Learning: Regression, Classification, Clustering, Feature Engineering, Hyperparameter Tuning, Cross Validation, Model Evaluation
AI/NLP: Embeddings, Semantic Search, Sentence Transformers, Cosine Similarity, Named Entity Recognition, LLM Applications
Coursework: Probability & Statistics, Data Analytics, Optimization

Leadership & Extracurriculars

Design Team Member — May 2023 – Jun 2025
Traders@BPHC — *BITS Pilani Hyderabad Campus*

- Created branding, marketing creatives, and promotional material to support club outreach, event visibility, and student engagement campaigns.

Logistics Coordinator — Jan 2025
Verba Maximus — *BITS Pilani Hyderabad Campus*

- Coordinated logistics, participant management, and event execution workflows to ensure smooth scheduling, venue operations, and on-ground coordination.
